To: Anthony Gonzales
Force Impact Technologies Inc.

Letter of Intent

I am with Amstelveense Rugby Club and we are one of the large Rugby Clubs in the Netherlands. With currently 550 members, of which half of them are youth members and we are still growing. The club was founded in 1963 and over the years have had various successes both national as international. The fact that the international school is just around the corner from the club as well as a few multi nationals it is not strange that you can find up to 15 different nationalities in the club. So, although technical speaking we are in Amstelveen, we claim to be "the international rugby club of Amsterdam".

Currently, we lack a solution to adequate monitor, identify, and document head impacts. We believe that by measuring head impacts with the FITGuards on our players we can help to validate their usage in non-helmeted sports and ultimately lead to the introduction of the product to our organization. We are most impressed with what FITGuard has to offer in terms of impact monitoring and concussion mitigation, and would like to be considered for the beta-testing program. If successful, we would be consider incorporating the product into our player health program.

I am the Manager of Technical Committee overseeing all technical aspects of all teams at the club, we are interested in the viability of this product and if successful the device could be deployed to possible most of our teams in the club.

The potential for collaboration with your company offers a win-win-win outcome, and we very much look forward to working with you.

Kind regards

Signature
